

MULTI-PURPOSE CLEANING

Dilute EcoCare Activator 1:5 – 1:20 with cold tap water into a handy spray pack and use for all multi-purpose cleaning. Ideal for showers, bath, toilets, floors, kitchen surfaces, walls, tiles, BBQ's and other greasy surfaces etc. Rinse off with cold water.

FLOORS

When washing floors, spray diluted Activator (1:10) over the floor and leave for as long as possible before washing off. Or add approx. 50 mls Activator to a bucket of cold water and wash the floor in the usual way. Pour the bucket of water down the sink or toilet to help keep drains clean.

WINDOWS

Simply dilute Activator 1:40 with cold water, spray onto windows and rinse off in the usual way.

TILES & BATHROOM SURFACES

Dilute Activator 1:5. Spray over the surface. Leave for as long as possible (eg. 10 minutes or more) then rinse off. As the water is rinsed down, your drains will also be kept free of waste build-up and unwanted odour.

DRAIN CLEANING/ DEODORISING

To keep your kitchen drain (grease trap) in a clean, odour free condition add 2 cups (500mls) of Activator down sink per week mixed with 2 cups of cold tap water. For best results add 1/4 cup at end of each day mixed with 1 cup cold tap water. All other drains add 1 cup daily mixed with 1 cup cold tap water until odour or blockage has cleared.

CARPETS & SOFT FURNISHINGS

Dilute 1:10 with cold water, spray over spot, leave for few minutes then dab with a damp sponge or cloth – do not rub. Great for Pet stains too.

ODOUR CONTROL

Dilute Activator 1:10 with cold water and spray over any offensive waste. Great for Rubbish Bins - rinse bin with Activator after waste has been removed or simply spray and leave – and for Pet Odour – spray over offensive area or wash down pet area.

PLEASE NOTE

Do not use other harsh cleaning products or deodorisers when using Activator as this will reduce its effectiveness.

We recommend that the spray bottle is rinsed out and re-filled with fresh Activator at least fortnightly.
